

HOUSEWIRE

TURN THE HOUSE
INTO A GAME
EVERYONE HAS TO
SOLVE TOGETHER.

Multiple phones become one cooperative family game system.

DIFFERENT INFORMATION + DIFFERENT ABILITIES = ONE SHARED WIN

HOW IT WORKS

1 CHOOSE / 2 CONNECT / 3 SOLVE

- 1

CHOOSE

Pick a story case, family activity or head-to-head race.
- 2

CONNECT

Pass one phone, or link 2-4 phones on the same local network.
- 3

SOLVE

Trade private clues, call across rooms and act at the same time.

THREE WAYS TO PLAY

SAME HOUSE. DIFFERENT ENERGY.

- 01

ESCAPE CASES

Story escape rooms spread across real rooms. Private clues, camera, audio, motion and House Line make every player necessary.
- 02

FAMILY FREQUENCY

Pass one phone. Predict choices, order, spectrum or text; the answer owner seals the truth before the family reveal.
- 03

CIRCUIT RACE

Two teams face one synchronized course. Combine roles, communicate fast and race to a host-verified finish.

THE 30-SECOND
JUDGE MOMENT

One phone hears the clue. Another sees the route. A third holds the switch. The house unlocks only when they coordinate one timed action.

AI BUILDS THE GAME. PEOPLE BUILD THE BOND.

When configured, GPT-5.4 backs Case Forge narrative and Family Frequency question generation. Contextual hints use bounded local pressure signals. Deterministic local generation keeps the demo playable.

NO CHAT PERSONALITY

NO SURVEILLANCE

LOCAL-FIRST BY DESIGN

No account required. Player answers stay on the phone. Camera frames and raw sensor traces stay local. One-time voice is recipient-only and expires. Every permission has a playable fallback.
